

K

Hex head wood screw

Diameters: $\varnothing 6$ mm | $\varnothing 8$ mm | $\varnothing 10$ mm | $\varnothing 12$ mm

Length range: from 60 to 260 mm

Screw for fastening of wooden, steel and PVC elements to timber

HEX HEAD

PN-EN 14592:2008
+A1:2012

SCREW MATERIAL - Carbon steel

ANTI-CORROSION PROTECTION - Galvanized steel (white or yellow)

PRODUCT ADVANTAGES:

HEX HEAD - Hex head improves pull-through resistance of joint and allows steel-wood applications.

PARTIAL THREAD - Partial thread prevents splitting of elements being installed and guarantees their tight fastening.

EXAMPLES OF APPLICATIONS:

SUBSTRATES

Solid timber

Glued laminated timber
CLT, KVH, BSH/GLT

**Laminated Veneer
Lumber - LVL**

INSTALLATION INSTRUCTIONS

K - Hex head wood screw

1. Minimum distances in accordance with EN 1995

2. Minimum distances is valid for timber characteristic density of $\rho_k \leq 420 \text{ kg/m}^3$

3. In case of connection timber-timber minimum distances (a_1, a_2) should be multiplied by a factor of 1,45

4. For screws K with a diameter of $d > 6 \text{ mm}$ a pre-drill is required

5. Hole diameter d_o is valid for softwood

6. Hole diameter $d_{o,steel}$ is valid for steel plate

NOTES:

1. Characteristic resistances in accordance with EN 1995

2. In order to obtain a design resistance, use the following formula : $R_d = \frac{R_k * k_{mod}}{\gamma_M}$

Factors γ_M and k_{mod} should be taken in accordance with EN 1995

3. Design resistance for tension is smaller value of the following :

$$R_{ax,d} = \min \left\{ \frac{R_{ax,k} * k_{mod}}{\gamma_M}, \frac{R_{tens,k}}{\gamma_{M2}} \right\}$$

Factors γ_M and k_{mod} should be taken in accordance with EN 1995. Factor γ_{M2} should be taken in accordance with EN 1993

4. Characteristic resistances were calculated for a characteristic density of timber $\rho_k = 350 \text{ kg/m}^3$

5. Characteristic resistances were calculated considering that the threaded part of the screw is fully inserted into timber element

6. Characteristic shear resistances were calculated for connections with pre-drilled holes

7. Characteristic shear resistances for steel-timber connections were calculated for thin steel plate with thickness $t \leq 0,5d_w$

8. Characteristic shear resistances for steel-timber connections were calculated for thick steel plate with thickness $t \geq d_w$

9. Characteristic withdrawal resistances were calculated assuming an angle of 90° between screw and grain direction and for penetration length equal L_g

10. Characteristic head pull-through resistances were calculated for timber element
