## European Technical Assessment

**ETA-12/0272  
of 19/09/2022**

### General Part

**Technical Assessment Body issuing the European Technical Assessment**

Instytut Techniki Budowlanej

**Trade name of the construction product**

KPR-FAST, KPS-FAST, KPR/FAST,  
KPS/FAST, KPR-STRONG and KPS-STRONG

**Product family to which the construction product belongs**

Plastic anchors for redundant non-structural systems in concrete and masonry

**Manufacturer**

KLIMAS Sp. z o.o.  
ul. Wincentego Witosa 135/137  
Kuźnica Kiedrzyńska  
PL 42-233 Mykanów  
Poland

**Manufacturing plant**

Plant no 1, plant no 2  
Poland

**This European Technical Assessment contains**

39 pages including 3 Annexes which form an integral part of this Assessment

**This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of**

European Assessment Document EAD 330284-00-0604 "Plastic anchors for redundant non-structural systems in concrete and masonry"

**This version replaces**

ETA-12/0272 issued on 29/06/2018

*This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.*

*Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.*

## Specific Part

### 1 Technical description of the product

The KPR-FAST, KPS-FAST, KPR/FAST, KPS/FAST, KPR-STRONG and KPS-STRONG anchors consists of a plastic sleeve made of polyamide and an accompanying specific screw made of galvanised or stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The description of the products is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The performance given in clause 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or Technical Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1. Performance of the product

##### 3.1.1. Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	Annex C2

##### 3.1.2. Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension and shear loading	Annex C1
Resistance to pull-out or concrete failure under tension loading (base material group a)	Annex C2
Resistance in any load direction without lever arm (base material group b, c and d)	Annex C4
Edge distance and spacing	Annex B3, B4
Displacements under short-term and long-term loading	Annex C3, C5

### 3.1.3. Aspects of durability

Essential characteristic	Performance
Durability – corrosion of metal parts	- anchor sleeve – no metal parts - screw – see Annex A15 and B1
Durability – high alkalinity of plastic sleeve	no influence of high alkalinity

### 3.2 Methods used for the assessment

The assessment has been made in accordance with EAD 330284-00-0604.

### 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to the Decision 97/463/EC of the Commission of 27 June 1997 the system 2+ of assessment and verification of constancy of performance (see Annex V to regulation (EU) No 305/2011) applies.

### 5 Technical details necessary for the implementation of the AVCP system, as provided in the applicable European Assessment Document (EAD)

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited in Instytut Techniki Budowlanej.

For the type testing the results of the tests performed as part of the assessment for the European Technical Assessment shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between Instytut Techniki Budowlanej and the notified body.

Issued in Warsaw on 19/09/2022 by Instytut Techniki Budowlanej

Krzysztof Kuczyński, PhD  
Deputy Director of ITB

**Intended Use**

Fixing in concrete and in different types of masonry

**Legend**

- $h_{nom}$  = overall plastic anchor embedment depth in the base material
- $h_1$  = depth of drill hole to deepest point
- $h$  = thickness of member (wall)
- $t_{fix}$  =  $t_{tol}$  + thickness of fixture
- $t_{tol}$  = thickness of equalizing layer or non-load-bearing coating

<b>Product description</b> Materials			

**Specification of intended use**

**Anchorage subject to:**

- Static and quasi-static loads.
- Multiple fixing of non-structural applications.

**Base materials:**

- Reinforced or unreinforced normal weight concrete with strength classes  $\geq$  C12/15 (base material group a), according to EN 206.
- Thin-wall concrete elements, reinforced or unreinforced, with strength classes  $\geq$  C16/20 and wall thickness  $\geq$  30 mm (base material group a).
- Solid masonry (base material group b), according to Annex C3.  
Note: The characteristic resistance is also valid for larger sizes and larger compressive strength of the masonry unit.
- Hollow or perforated masonry (base material group c), according to Annex C3.
- Autoclaved aerated concrete (base material group d), according to Annex C3.
- Mortar strength class of the masonry M2.5 at minimum according to EN 998-2.
- For other base materials of the base material group a, b, c and d the characteristic resistance of the anchor may be determined by job site tests according to TR 051:2018-04.

**Temperature range:**

- -20°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C).

**Use conditions (environmental conditions):**

- Structures subject to dry internal conditions (zinc coated steel, stainless steel).
- Structures subject to external atmospheric exposure, if anchor is not directly subjected to this exposure, i.e. external cladding elements screen the anchor, and the head of screw is additionally protected by permanently elastic coating which precludes corrosion from occurring and prevents moisture from entering into plastic sleeve (zinc coated steel).
- Structures subject to external atmospheric exposure including industrial and marine environment (stainless steel).
- Structures subject to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

**Design:**

- The anchorages are designed in accordance with the TR 064:2018-05 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- Anchors are only to be used for multiple fixings for non-structural application, according to TR 064:2018-05.

**Installation:**

- Hole shall be drilled by the drill modes given in Annexes C2 and C3 for use categories a, b, c and d; the influence of other drilling methods may be determined by job site tests according to TR 051:2018-04.
- Anchor installation shall be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation shall be executed in temperature from -20°C to +40°C.
- Exposure to UV due to solar radiation of the anchor not protected by the mortar shall not exceed  $\leq$  6 weeks.
