Section 1. PRODUCT DESCRIPTION

SELF-DRILLING SCREW WITH EPDM WASHER FOR FIXING STEEL SHEETS

IN WOODEN SUBSTRATE – WFD-4,8

Self-drilling screw WFD-4,8 is made of carbon steel coated with 12 μ m zinc coating (WFD/WFDOC) and SQ ceramic coating (WFD-D). Screw has SW hex head, pin threaded for use in timber, self-drilling tip and EPDM washer. Self-drilling screw heads can be painted according to RAL palette providing coating which is resistant to mechanical damages and UV radiation and ensures permanent colour adjusted to roof covering.

Application:

- for fixing steel sheets to wooden substrates
- for fixing steel corrugated sheets to wooden substrates
- for fixing steel roof tiles to wooden ground

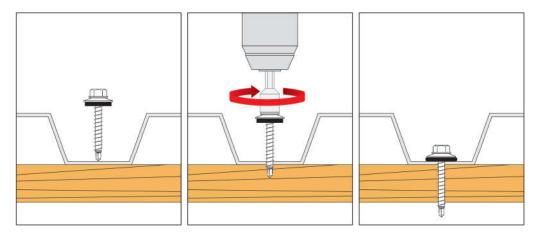

POLSK

Self-drilling screws hold European Technical Assessment: ETA-16/0443

Section 2. METHOD OF INSTALLATION

- 1. Original self-drilling screws delivered by the manufacturer can be used only.
- 2. Before installation identify the substrate, its thickness and environmental conditions (expressed as corrosivity categories), and then select screws which meet the above criteria.
- 3. Correctly select screw type, its length, drilling capacity depending on sum of thickness values of members being fixed and effective depth of anchorage.
- 4. Drilling capacity for each screw is given in corresponding Product Data Sheet and European Technical Assessment and stands for the sum of thickness values of members being fixed.
- 5. Make sure to set optimum rotary speed when screwing, as too high rotary speed may cause burning of drilling bits and make it impossible to fasten the screw.
- 6. At all times screws should be installed perpendicularly to the substrate surface.
- 7. Make sure to press the washer correctly, as when the washer is pressed either too strongly or too weakly, lack of tightness is likely, which may result in corrosion in the fixing point.
